## FEATURES

- (1) 8.4" SVGA color display with High Brightness (350cd/m<sup>2</sup>).
- (2) Wide viewing angle and wide operating temperature.
- (3) Built in Long Life CCFLs (MTBF:50,000 h).  
( Conditions / Ta:25°C I<sub>FL</sub>:6.0mA(rms)(continuing lighting), f<sub>FL</sub>:40kHz )
- (4) Replaceable structure of lamp units.
- (5) RoHS compatible
- (6) Mounting compatible with LTM08C351 series.

**TENTATIVE**

**RoHS compatible**

## MECHANICAL SPECIFICATIONS

Item	Specifications
Dimensional Outline (Typ.)	199.5 (W) x 149.5 (H) x 12.0 (D) mm

Note) The different points between LTA084C270F and LTM08C351L are below.

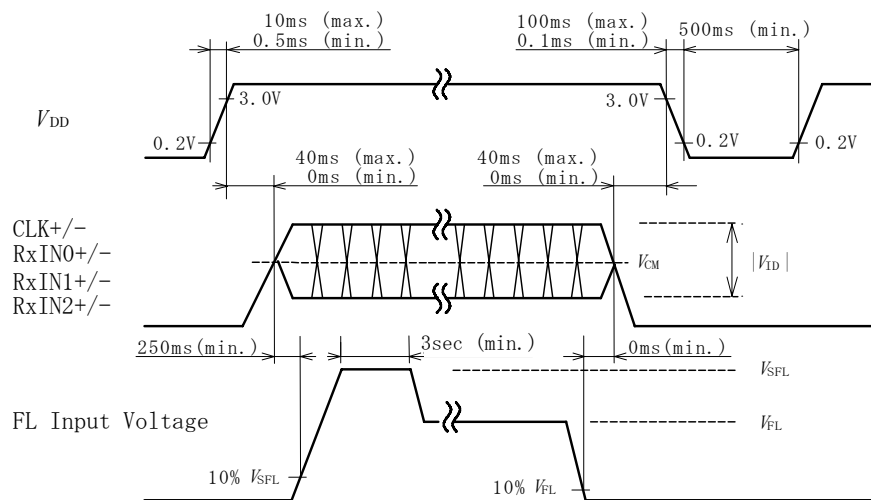

- 1) The lamp unit of LTM08C351L can not use for LTA084C270F.  
But the lamp unit of LTA084C270F can use for LTM08C351L.
- 2) The rear structure is changed.  
The Metal PCB shield is added and the Plastic frame design is different from LTM08C351L.  
There are slight differences. (Refer to page.3 rear dimensional outline in detail.)
- 3) LTA084C270F Bezel Opening is wider than that of LTM08C351L.
- 4) The reverse function (REV) is added.  
(Refer to page.7 Pin Assignment No.17.)
- 5) LTA084C270F Viewing angle and Operating temperature are wider than LTM08C351L.
- 6) LTA084C270F total weight is different from LTM08C351L. (Refer to page.1 mechanical specification.)

## (2) Horizontal Timing

**TIMING SPECIFICATION** \*1 \*2 \*3 \*4 \*5 \*6

Item	Symbol	Min.	Typ.	Max.	Unit	Remarks
Frame Period	t1	604 x t3	628 x t3 16.58	677 x t3 17.86	---	ms
Vertical Display Term	t2	600 x t3	600 x t3	600 x t3	---	
One Line Scanning Time	t3	944 x t5 26.3	1056 x t5 26.4	1064 x t5 ---	---	μs
Horizontal Display Term	t4	800 x t5	800 x t5	800 x t5	---	
Clock Period	t5	24.7	25.0	27.8	ns	

\*1 Refer to "TIMING CHART" and LVDS (DC90C365) specifications by National Semiconductor Corporation.

\*2 If ENAB is fixed to "H" or "L" level for certain period while NCLK is supplied, the panel displays black with some flicker.

\*3 Don't fix NCLK to "H" or "L" level while the VDD is supplied.

If NCLK is fixed to "H" or "L" level for certain period while ENAB is supplied, the panel may be damaged.

When it holds on, DC voltage supplies to liquid crystal materials and it may cause damage to liquid crystal materials.

\*4 Please adjust LCD operating signal timing and FL driving frequency, to optimize the display quality.

There is a possibility that flicker is observed by the interference of LCD operating signal timing and FL driving condition (especially driving frequency), even if the condition satisfies above timing specifications and recommended operating conditions shown on page 1.

\*5 Do not make t1, t2 and t3 fluctuate.

If t1, t2 and t3 are fluctuate, the panel displays black.

\*6 Keep constant the number of clock within one line scanning time and the number of scanning line within one frame period.

**FOR SAFETY**

LCD module is generally designed with precise parts to achieve light weighted thin mechanical dimensions. In using our Modules, make certain that you fully understand and put into practice the warnings and safety precautions detailed in Engineering Information No.EE-N001,"CAUTIONS AND INSTRUCTIONS FOR TOSHIBA LCD MODULES". Refer to individual specifications and TECHNICAL DATA sheets (hereinafter called "TD") for more detailed technical information.

**1) SPECIAL PURPOSES**

A) Toshiba Matsushita Display Technology's Standard LCD Modules have not been customized for operation in extreme environments or for use in applications where performance failures could be life-threatening or otherwise catastrophic.

B) Since Toshiba Matsushita Display Technology's Standard LCD Modules have not been designed for operation in extreme environments, they must never be used in devices that will be exposed to abnormally high levels of vibration or shock which exceed Toshiba Matsushita Display Technology's published specification limits.

C) In addition, since Toshiba Matsushita Display Technology Standard LCD Modules have not been designed for use in applications where performance failures could be life-threatening or catastrophic, they must never be installed in aircraft navigation control systems (such as, but not limited to Traffic Collision Avoidance System and Air Traffic Indicator), in military defense or weapons systems, in critical industrial process-control systems (e.g., those involved in the production of nuclear energy), or in critical medical device or patient life-support systems.

**2) DISASSEMBLING OR MODIFICATION**

DO NOT DISASSEMBLE OR MODIFY the module. It may damage sensitive parts inside LCD module, and may cause scratches or dust on the display.

Toshiba Matsushita Display Technology does not warrant the module, if customer disassembled or modified it.

**3) BREAKAGE OF LCD PANEL**

DO NOT INGEST liquid crystal material, DO NOT INHALE this material, and DO NOT CONTACT the material with skin, if LCD panel is broken and liquid crystal material spills out.

If liquid crystal material comes into mouth or eyes, rinse mouth or eyes out with water immediately.

If this material contact with skin or cloths, wash it off immediately with alcohol and rinse thoroughly with water.

**4) GLASS OF LCD PANEL**

BE CAREFUL WITH CHIPS OF GLASS that may cause injuring fingers or skin, when the glass is broken.

**5) ELECTRIC SHOCK**

DISCONNECT POWER SUPPLY before handling LCD module.

DO NOT TOUCH the parts inside LCD module and the fluorescent lamp's connector or cables in order to prevent electric shock, because high voltage is supplied to these parts from the inverter unit while power supply is turned on.

**6) ABSOLUTE MAXIMUM RATINGS AND POWER PROTECTION CIRCUIT**

DO NOT EXCEED the absolute maximum rating values under the worst probable conditions caused by the supply voltage variation, input voltage variation, variation in parts' constants, environmental temperature, etc., otherwise LCD module may be damaged.

Employ protection circuit for power supply, whenever the specification or TD specifies it.

Suitable protection circuit should be applied for each system design.

**7) RECOMMENDED OPERATION CONDITIONS**

The performance and quality of the LCD panel are warranted only when the LCD panel is used within "the recommended operation conditions". Toshiba Matsushita Display Technology Co., Ltd. never warrants the performance and quality of the LCD panel when you use the LCD panel over "the recommended operation conditions", although within "the absolute maximum rating".

To use the LCD panel over "the recommended operation conditions" may have bad influence on the characteristics and reliability of the LCD panel and may shorten the life of the LCD panel.

Therefore, when designing the whole set, not to be over "the recommended operation conditions", you should fully take care of supply voltage change, characteristic of connection parts, surge of input-and-output line, and surrounding temperature.

**8) DISPOSAL**

When dispose LCD module, obey to the applicable environmental regulations.
